PROFESSIONAL SUMMARY

Software engineer with 3 years of experience building production systems end to end. Founder of AutomatiQ, where I design and operate multi-tenant SaaS platforms that currently run the daily operations of more than 21 businesses in Colombia. In parallel I provide development services to Vectux Analytics, an AI and advanced analytics consultancy based in Mexico City, with scope extended to full MVP delivery and Google Cloud infrastructure. I work with AI assistants built into my development workflow, without delegating review of what reaches production. Final year of a Software Engineering degree.

PROFESSIONAL EXPERIENCE

AutomatiQ — Founder & Lead Developer

December 2025 – Present · Bucaramanga, Colombia

- My own SaaS software company serving small and medium businesses. Responsible for product, architecture, development, deployment, support and customer relationships.
- Scaled Gran Mayorista —a venture with partners, a separate company from AutomatiQ— from a single-tenant system to multi-tenant SaaS; it now runs operations for more than 10 wholesale businesses across sales, inventory, online storefront, employees and payroll.
- Shipped AutomatiQ POS: a cloud point-of-sale platform with web catalog, table management, offline mode with deferred sync, real-time reporting, per-business data isolation and role-based access control.
- Building a DIAN electronic invoicing portal on top of the Factus API: a single piece of infrastructure covering the electronic documents a company needs, with document packages, clients and allocation administered separately for AutomatiQ and for Gran Mayorista.

Vectux Analytics — Frontend Developer — Next.js & TypeScript

May 2025 – Present · Mexico City (remote)

AI and advanced analytics consultancy serving enterprise clients across Mexico, Chile, Guatemala and El Salvador. Engaged under a professional services contract.

- Build user interfaces with React, Next.js and TypeScript, applying server-side rendering, incremental static regeneration, code splitting and Core Web Vitals optimization.
- Integrate REST and GraphQL APIs, manage global state and implement user authentication with JWT and OAuth2.
- Scope extended beyond frontend: delivery of complete MVPs including backend, and setup of Google Cloud Platform infrastructure.
- Work with RAG and embeddings as a knowledge base for AI agents: chunking, semantic retrieval and context injection.
- Unit and integration tests with Jest and React Testing Library; code reviews, technical documentation and agile ceremonies under Scrum.
- Enterprise projects for clients across the region; client names and details are covered by a confidentiality agreement.

Independent projects — Freelance & contract development

July 2023 – March 2025 · Remote

- Delivered web and mobile applications end to end for clients in Colombia and abroad, covering backend, frontend, deployment and support.
- Detailed work in the projects section below.

PROJECTS

- **Tesla Lift** (2025) — Mobile application for elevator installation, maintenance and support service management. Published on the App Store and Play Store. *React Native, Expo, Next.js, Supabase, Push notifications.*
- **LaLista WBC** (2024–2025) — Full web platform: custom backend, media management, real-time chat, domain, hosting and deployment. *Node.js, Express, MongoDB, Next.js, React, Cloudinary, Vercel.*
- **CS Tracer — CardSoftware** (2025) — Frontend development for the CS Tracer product under a one-month contract, embedded in the client team. *Next.js, React, TypeScript.*
- **Earlier work:** Transcender Global (2024) — React, Next.js, Tailwind CSS, Azure DevOps; Software development consulting (2024); Raffle management platform (2023–2024) — Node.js, Express, MongoDB, Vue 3, Quasar, Wompi, JWT; Transport company system (2023) — Node.js, MySQL.

EDUCATION

Software Engineering degree (in progress) — Corporación Unificada Nacional de Educación Superior (CUN) — Colombian university · Online · Expected graduation: 2027

Technologist Degree (Tecnólogo) in Software Analysis and Development — SENA — Colombia's national vocational training institute · San Gil, Colombia · 2024

High school diploma, technical emphasis in Electronics — Colegio San José de Guanentá · San Gil, Colombia · 2021

CERTIFICATIONS

Platzi — Full Stack Development track, with certifications in React, Vue, React Native and Scrum.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, Vue 3, Quasar, Tailwind CSS

Mobile: React Native, Expo

Backend: Node.js, Express, REST APIs, GraphQL, JWT, OAuth2

Data: PostgreSQL, MySQL, MongoDB, Supabase

Cloud & infrastructure: Google Cloud Platform, Vercel, multi-tenant architecture, CI/CD

Artificial intelligence: RAG, embeddings, AI-assisted development (Claude Code, Cursor) with review and testing of generated code

Integrations: Colombian electronic invoicing — DIAN (Factus), Wompi, WhatsApp, Cloudinary

Practices: Git, Jest, React Testing Library, code review, Scrum, Azure DevOps, Jira

LANGUAGES

Spanish — native

English — intermediate: I read technical documentation and work in writing without difficulty; conversation actively improving
